Choosing life.

Overview

Every year, thousands of patients all over the world are diagnosed with life-threatening cancer or other diseases for which a stem cell transplant from an unrelated donor is their best or only hope of a cure.

About 70 percent of patients in need of a transplant do not have a matching donor in their family. They depend on bone marrow registries such as Ezer Mizion to match them with an unrelated donor and facilitate a transplant.

These patients' transplant teams will seek a donor in Bone Marrow Donors Worldwide (BMDW), where there are over 22 million unrelated donors listed in Registries around the world.

As an underrepresented minority, Jewish patients have very slim chances of finding a match in international registries. That is why Ezer Mizion established its registry. Even though we will serve any and every patient that comes our way, our primary focus is to provide for the needs of Jewish patients everywhere.

With the top international accreditation standards of WMDA (World Marrow Donor Association) and affiliation with NMDP (National Marrow Donor Pool), Ezer Mizion is known as a leader in the field. Today Ezer Mizion collaborates with transplant centers in close to 50 countries. At the end of 2013 we matched over 6,300 patients with stem cell donors and facilitated over 1,400 lifesaving transplants.

"I just want to get better and go back to kindergarten to play with my friends"

- Five year old Yonatan

"Ever since our little Shlomo was diagnosed with cancer, we have been hanging on tight. Ezer Mizion has been our lifeline in these trying times."

- Naftali, Shlomo's father

DIRECTORS' MESSAGE

Taking stock of the year is always accompanied with different perspectives and emotions. For both of us, 2013 was a year that was different than any that we ever experienced before. It was a challenging year in ways that we never anticipated or dreamed of.

From the position of active, normative people who are constantly on the scene supporting people who face serious health challenges, we both crossed from the giving side that we are always busy with. We suddenly found ourselves on the receiving end. For both of us, our lives took a sudden unexpected turn as our spouses were diagnosed with cancer.

We know what it looks like and we are familiar with the feeling, reactions and emotional processes. We know all about medical teams, therapy agendas and prognoses. We were equipped with information and knowledge and a familiarity with these circumstances. That was undeniably helpful. But actually being there as a cancer patient caregiver and spouse is incredibly and indescribably difficult.

Rabbi Dr. (Hon.) Chananya Chollak
International Chairman

Chananya: "We were all optimistic and hopeful despite Leah's terrible prognosis. Her doctors used the best treatment options available. Stem cell transplantation was not considered since it is not used as a cure for her kind of cancer. The treatments were excruciating but the drive to live carried us on with hope for better times.

"Leah fought valiantly. We did everything humanly possible and prayed fervently. We were deeply saddened when the cancer prevailed and she tragically left us in October. Our pain and longing is very great. My children and I, everyone at Ezer Mizion and the entire community all miss Leah terribly."

Bracha: "As soon as Motti got his diagnosis and the doctor's assessed his treatment protocol, we knew he would need a stem cell transplant to survive. It hit us like a ton of bricks. I suddenly felt how fragile life really is.

"I also sensed a deep irony that everything that I had dedicated myself to for the past seventeen years to help other people was now becoming

Dr. Bracha Zisser
Director, Bone Marrow Registry and
Oranit Cancer Support Services

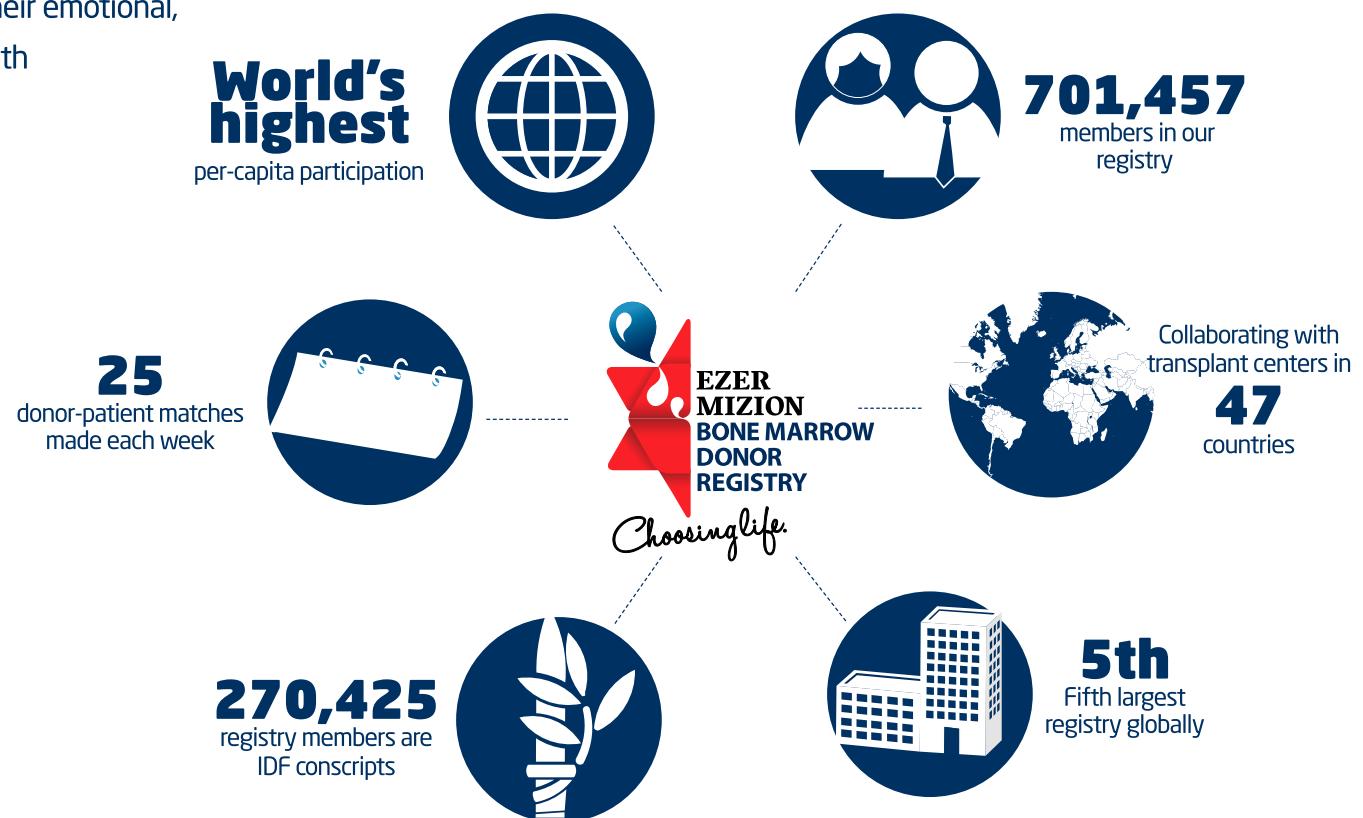

my anchor and the source of hope for my dear husband's survival. How amazing it was when we found the one single match for him in Ezer Mizion's registry that I have been tirelessly toiling to develop all these years.

"With Motti's gradual miraculous recovery following his stem cell transplant I feel that I have received a profound message. The message for me is that whatever it is that a person does in this world, he is ultimately the greater beneficiary. No one can ever project when or how, but life always comes full circle."

Our similar and at the same time very different experiences in the course of 2013 have eloquently and powerfully deepened our commitment to helping the many people who turn to us in their time of need. We have endured much uncertainty, pain and turbulence in the past year. We choose to use it as a learning experience to become more dedicated and upgrade our registry, its lifesaving services and the support we provide for patients and their families in their struggle with cancer and serious illness.

With your support Ezer Mizion can reach its goals

- To grow the registry by adding new potential stem cell donors
- To enrich the registry with broader representation of ethnic minorities
- To facilitate more transplants and to save more lives
- To continue leading by abiding with international standards
- Research Projects
- To assist cancer patients and their families with their emotional, functional and financial needs as they struggle with life threatening illness

Fighting A War on Two Fronts and Winning

The extended Katz family: second from left: Zelda Katz and her grandson Ilai (front row) both had cancer at the same time. Both had stem cell transplants from donors in Ezer Mizion's registry. Shown here at Zelda's first meeting with Nadav, her lifesaving donor (third from left). Also shown far right is Nofer, Ilai's donor and Miki, his mother who said: "Without Ezer Mizion's help all through this saga, we would never have made it!"

THE CANCER "EPIDEMIC"

More Cancer Patients

All over the world the incidence of cancer has risen. The American Cancer Association predicts that by 2030 the global cancer burden is expected to double to epidemic proportions... That means a lot more people who will need cancer support services.

Stem Cell Transplants as a Cure

In recent years, cancer has become the number one cause of death around the world. Bone marrow transplants are increasingly being used as a cure for cancer and for about one hundred other illnesses!

Ezer Mizion's Challenges

- A marked increase in the number of cancer patients and their families in need of support services
- A significant rise in search requests for matching stem cell donors
- Growth in volume demands upgrade of service facilities and staff

Our Mission: Choosing Life

When everything is collapsing, it's good to know that Ezer Mizion is there to help. From diagnosis to donor, from treatment to recovery. Generous supporters like you make Ezer Mizion's lifesaving work possible. Join us! Help us intensify our efforts and provide cancer patients with the resources they need to survive, get better and thrive.

- ◀ Michal and her three children at their first meeting with the stem cell donor who saved her life. The welcome poster they are holding says: "Thank you for saving our mother".

CHOOSING LIFE COMPELS US TO

Abide by international standards

- Deeper level tissue-typing
- Speed up the transplant process
- Increase chances of success
- Engage in scientific research on transplant issues

Expand the Registry

- Raise public awareness about stem cell transplants
- Rally additional potential donors
- Expand representation of different ethnic groups

Broaden cancer patient support services

- Empower patients and their families
- Embrace a holistic care approach
- Ensure that we reach everyone who needs us

UNDER CONSTRUCTION

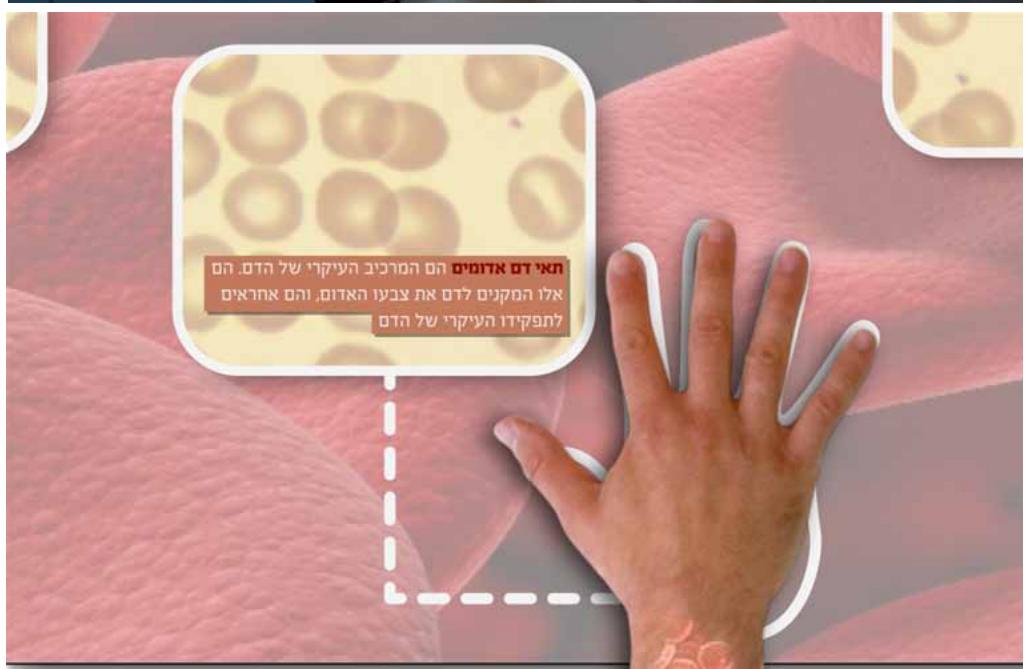

New Bone Marrow Donor Registry Center

On a parcel of land allocated by the Petach Tikvah municipality and adjacent to the existing Ezer Mizion Oranit cancer patient guest home, a five story building that will serve as the new location for Ezer Mizion's Bone Marrow Donor Registry, is currently under construction.

The new building will also feature a residential floor for post transplant patients and an educational visitors center.

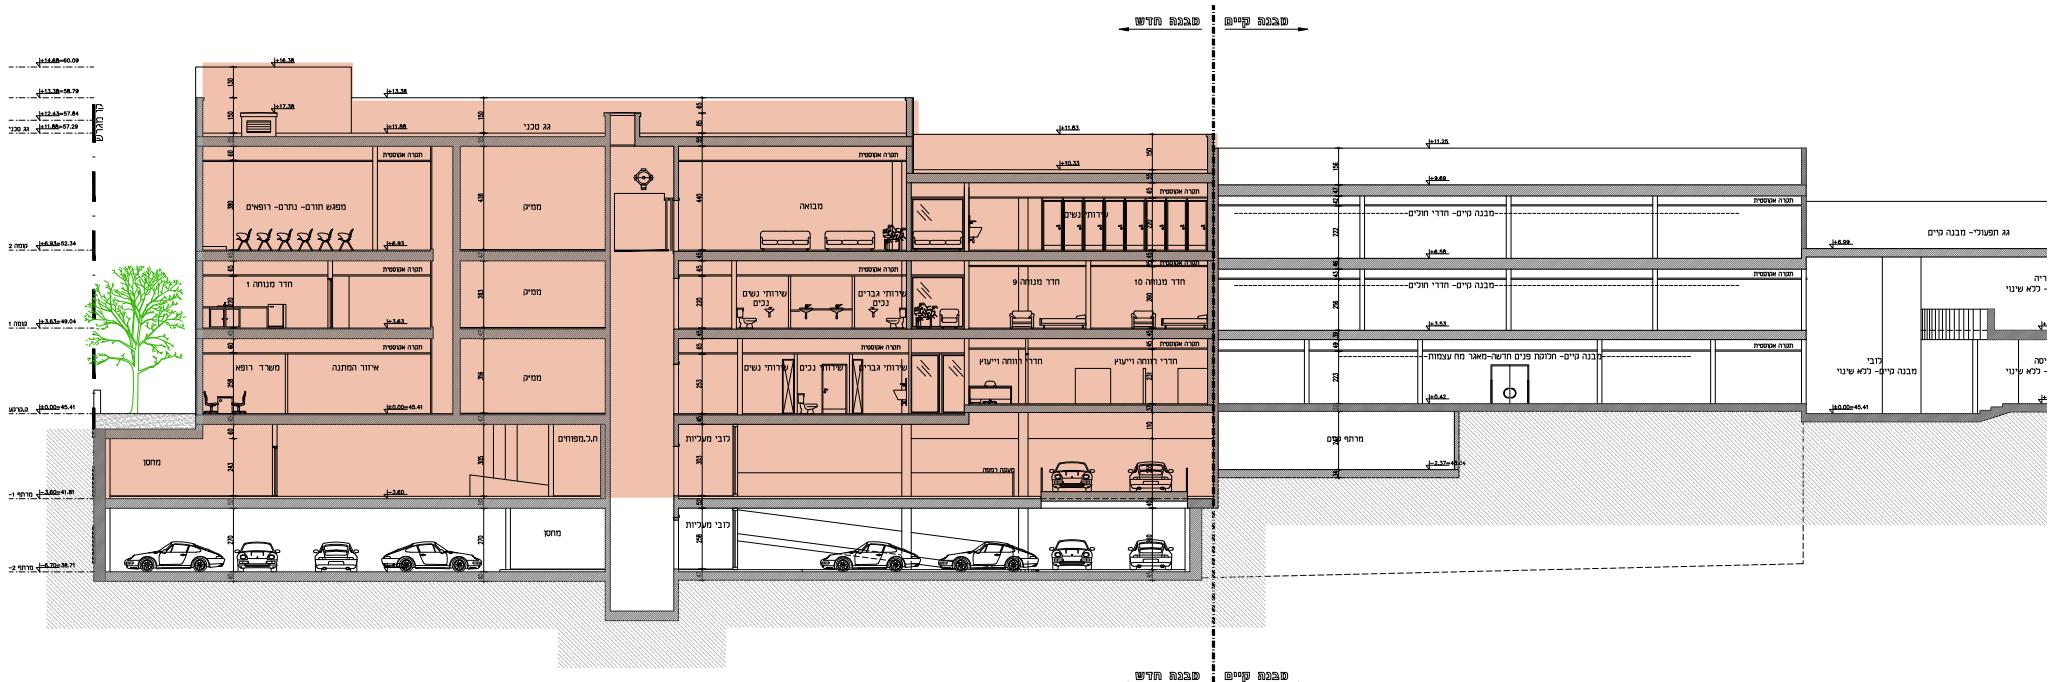

Dedication opportunities are available. For further information on taking a share in this major, unique project contact: rdd@ezermizion.org

◀ Two year old cancer patient Adar at Ezer Mizion's summer camp that she enjoyed together with her parents and siblings.

Visitor's Center - digital image concept

A RESPONSE FOR PRESENT AND FUTURE NEEDS

Location: 40 Kaplan Street, Petach Tikvah

Total area: 4,204 sq. meters

Number of floors: 4 floors

Architect: Avner Yashar

Project Manager: Itsik Ashkenazi, Civil Engineer

Construction completion: 2015

Note: The second underground floor shown in the floorplan above relates to the existing Oranit building and will serve its staff and guests. Only the shaded areas are part of this construction project.

Floor 1: Bone Marrow Donor Registry

This floor will house the Bone Marrow Registry brain center and activities. It is here that search requests will be processed, donor-patient matches will be made and life saving stem cell transplants coordinated. These facilities will foster enhanced Registry function and upgraded services for today and for the future.

Floor 2: Residential Wing

Guest suites for patients and their companions in pre and post transplant stages, when they emerge from isolation and from the hospital for the period of convalescence that requires close access to the hospital. The patients and their companions will be hosted in the guest suites and receive all the support and guidance they need on their way to recovery.

Floor 3: Visitors Center

The Visitors Center will host individuals and groups from Israel and from all over the world. Guests will enjoy an interactive educational experience that will tell the story of the Jewish genome. The Center will focus on imparting a message of shared obligation and inspiring visitors with a commitment to their communities and Jews the world over. Focusing on the roots of the Jewish Nation and following the route of our people throughout the years in all parts of the world, the center will spotlight the bond that exists between Jews, our genetic makeup, the DNA that ties us all together and what it means for each of us.

STRATEGIC PRIORITIES

Serving All Communities

As genetic stem cell matching is based on ethnicity, a representation of all ethnic groups in the registry is vital. Ezer Mizion focuses on raising public awareness on the importance and relative ease of donating bone marrow and dispelling superstitions prevalent among certain ethnic groups that have led to a serious shortage of potential donors for patients in these groups.

Ezer Mizion is committed to increasing access to stem cell transplants and improving outcomes for all patients in need!

Research: HLA Haplotype Frequency and Registry Models Analysis

In order to better plan successful recruitment of volunteer unrelated donors and expansion of the Ezer Mizion registry, an exciting collaboration with the Bioinformatics Research Group of NMDP was initiated.

The main purpose of this research engagement is to obtain geographically and ethnically stratified HLA genotype data, and facilitates analysis of the frequency as well as prospective registry and regional diversity of HLA haplotypes in the Israeli population.

Estimating haplotype frequencies within the population is critical to effective and thoughtful planning for development of donor registries. This data can inform prospective planning and determine recruitment goals within and across ethnic groups of the registry, in order to better serve the patients in need for HCT.

We plan to develop a model based on a range of registry size, composition and expected availability patterns, and generate match rate estimates by ethnic groups. This information will be useful to design strategies for recruitment and determining the "optimal" size of the registry inventory.

- ◀ New members joining the registry with simple cheek swabs at a stem cell donor recruitment drive

Continued Growth

Following is data that measures and reports on our registry's past achievements which we are expecting to further accelerate in our new facility.

In response to the marked increase in illnesses that need stem cell transplant as a cure and to the growth in the number of search requests for matching stem cell donors that we handle each year, we are continuing to expand our registry and broaden our support services for cancer patients.

With the construction of our new Bone Marrow Registry Center building we look forward to accommodating current and future needs, ensure increased efficiency, improve effectiveness and operate at the highest professional level.

► Five year old Simmie with her devoted Ezer Mizion volunteer who keeps her smiling.

Fig. 1: Active Donors and Registry Growth

This figure shows the growth of our Registry in the number of potential donors in the registry. 51,995 new potential members joined the registry in 2013.

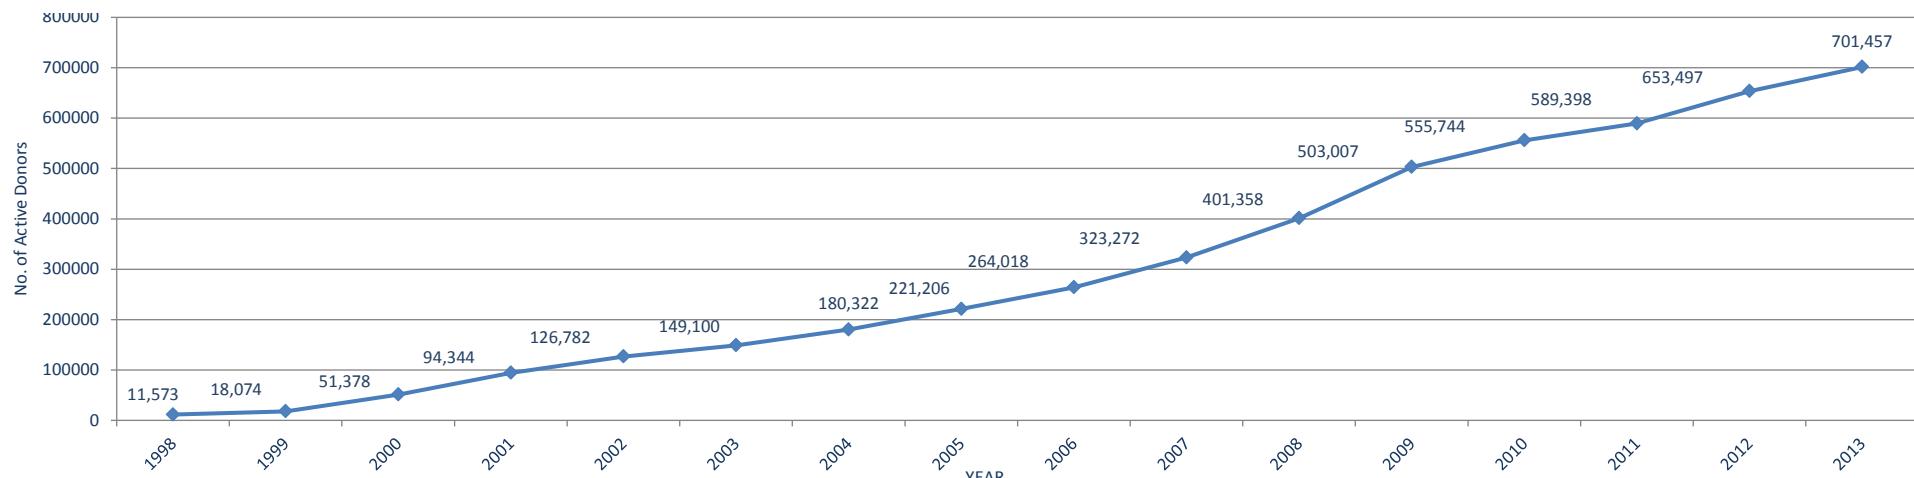

Fig. 2: Complete Matches (CT's) per year

1,261 complete matches (CT's) indicating a stem cell donor's full genetic compatibility with a patient, were made in 2013. The Registry membership grew by 7.3% in 2013 while an impressive, increase of 16.9% in complete matches was noted over the same period.

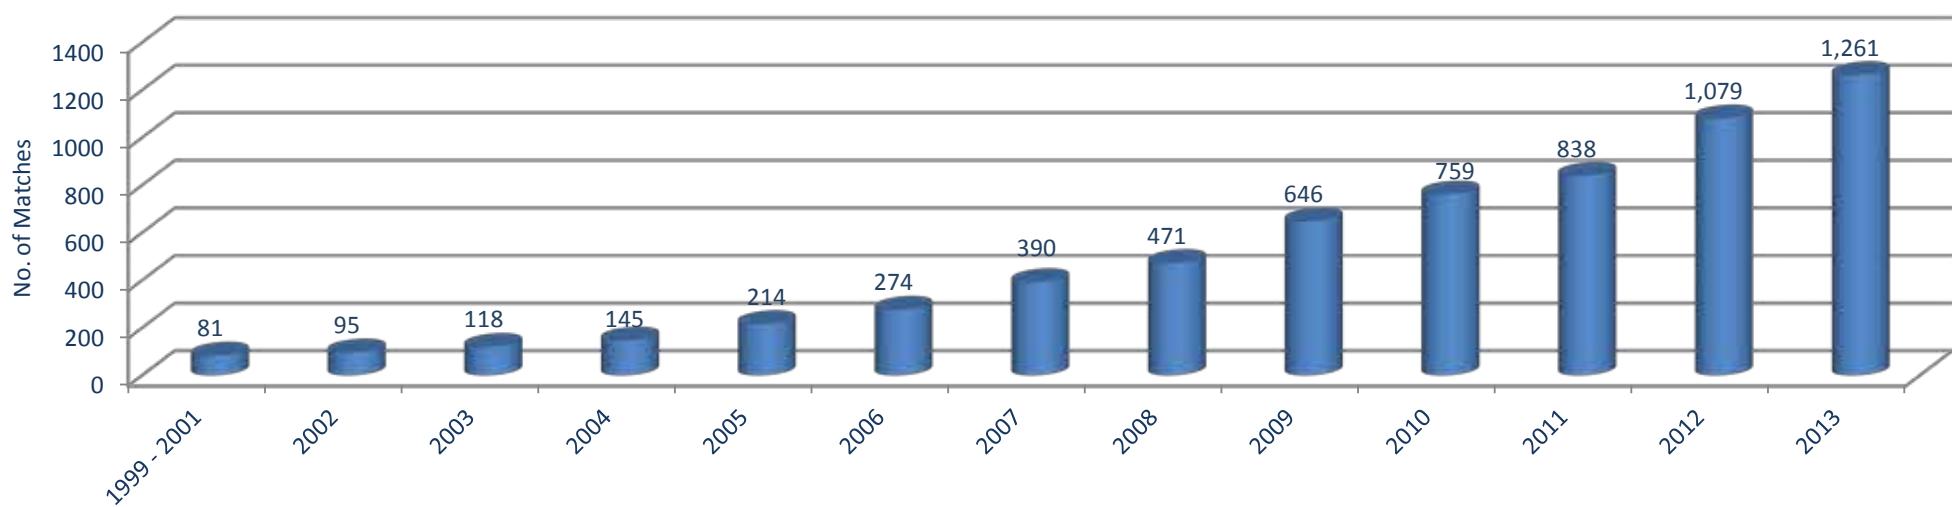

Fig. 3: Transplants Facilitated

In 2013 there was an increase of 22.3% in total transplants facilitated by our Registry. The 260 transplants from this year represent over one fifth of the total transplants facilitated since our establishment.

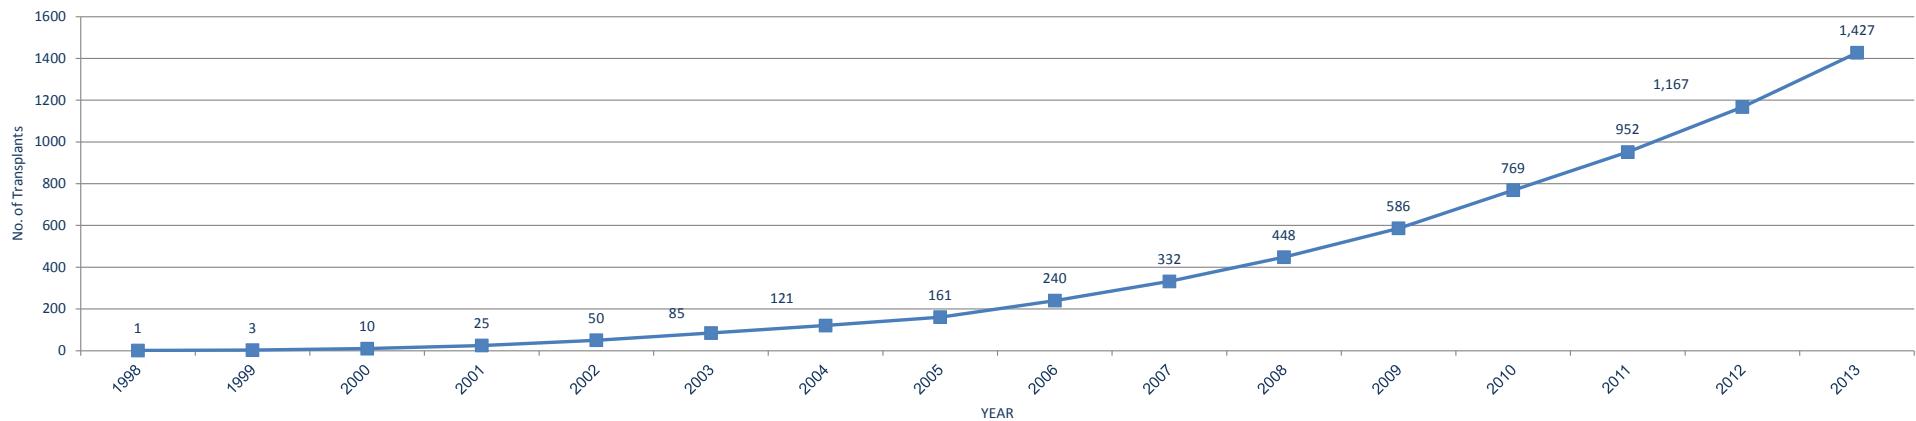

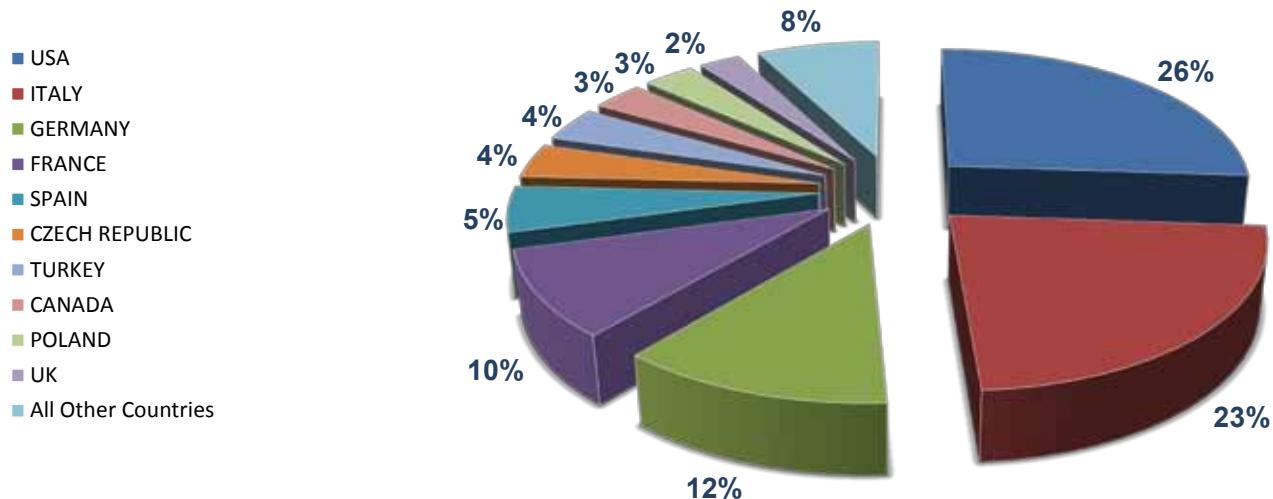

Fig. 4: Transplants by Country in 2013

The following chart shows transplants that were facilitated by Ezer Mizion's Registry per country in percent. The chart includes all countries where transplants were facilitated by our registry in 2013, except for Israel.

► Shahar (right) and her twin sister at her first meeting with the IDF soldier who saved her life. "The nicest thing about getting better is having my hair back!"

Fig. 5: Transplants per 10,000 Stem Cell Donors

This table is extracted from Ezer Mizion Registry's report to WMDA (World Marrow Donors Association) for 2013. It tracks the increase in total transplants as well as the growth in number of transplants per ten thousand donors in the registry, which continued to rise along with and in spite of the registry's growth through the years reported.

| Year | Stem Cell/Bone Marrow Donors in Registry | Total Transplants | International Transplants | Total Transplants per 10,000 donors | International Transplants per 10,000 Donors |
|------|--|-------------------|---------------------------|-------------------------------------|---|
| 2009 | 503,135 | 130 | 59 | 2.58 | 1.17 |
| 2010 | 555,691 | 162 | 88 | 2.92 | 1.58 |
| 2011 | 589,282 | 183 | 83 | 3.11 | 1.41 |
| 2012 | 653,398 | 215 | 123 | 3.29 | 1.88 |
| 2013 | 701,461 | 260 | 157 | 3.71 | 2.24 |

Fig. 6: Key Performance Indicators for 2013

Ezer Mizion continuously monitors registry performance in order to identify areas of both strength and opportunities for upgrade. Ezer Mizion uses Key Performance Indicators (KPI) defined by WMDA (World Marrow Donors Association) Quality Assurance Working Group. KPI assessment shows that the registry key activities and performance are carried out according to the highest performance standards established by WMDA.

| KPI | Definitions | Proposed target value by WMDA | Ezer Mizion 2013 |
|--------|---|-------------------------------|------------------|
| KPI #1 | % of high resolution typing performed within 14 days | > 80% | 87.0% |
| KPI #2 | % of blood samples for confirmatory typing shipped within 14 days of requests | > 80% | 80.0% |
| KPI #3 | % donor availability at CT stage | > 80% | 81.2% |

INTERNATIONAL PRESENCE

Fig. 6: Comparing IDF and Civilian Matches per year

Then number of IDF recruits joining the Registry (49,280) increased by 19% in 2013. Their total presence in the registry grew from 33.8% in 2012 to 38.6% in 2013.

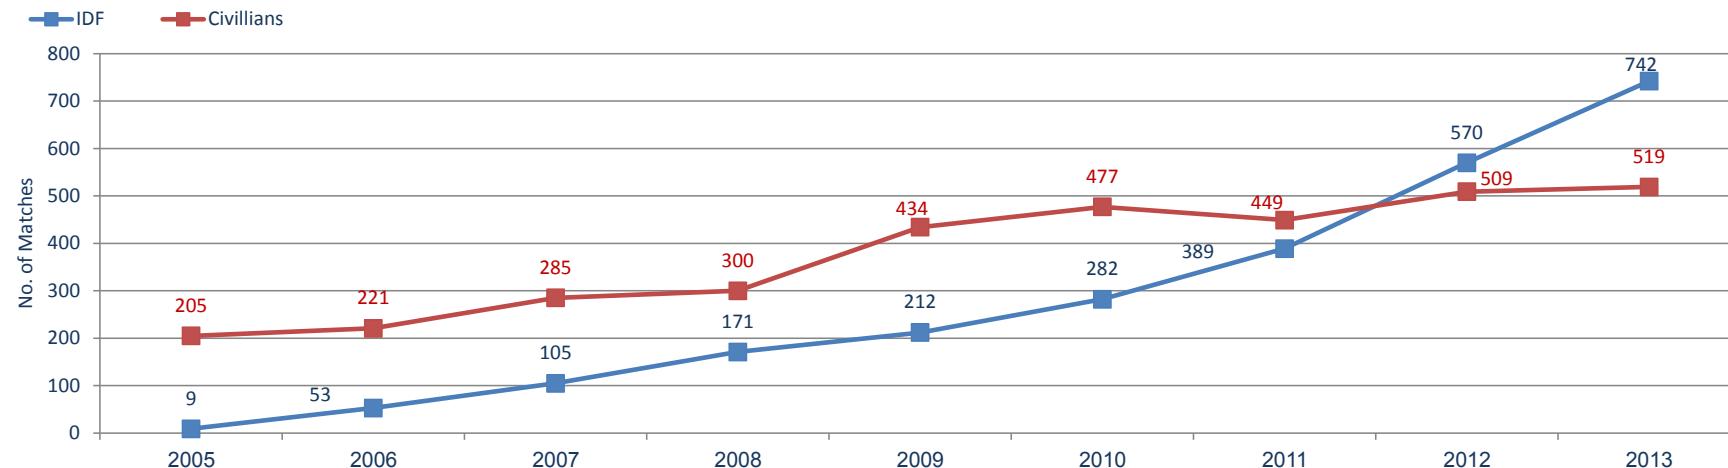

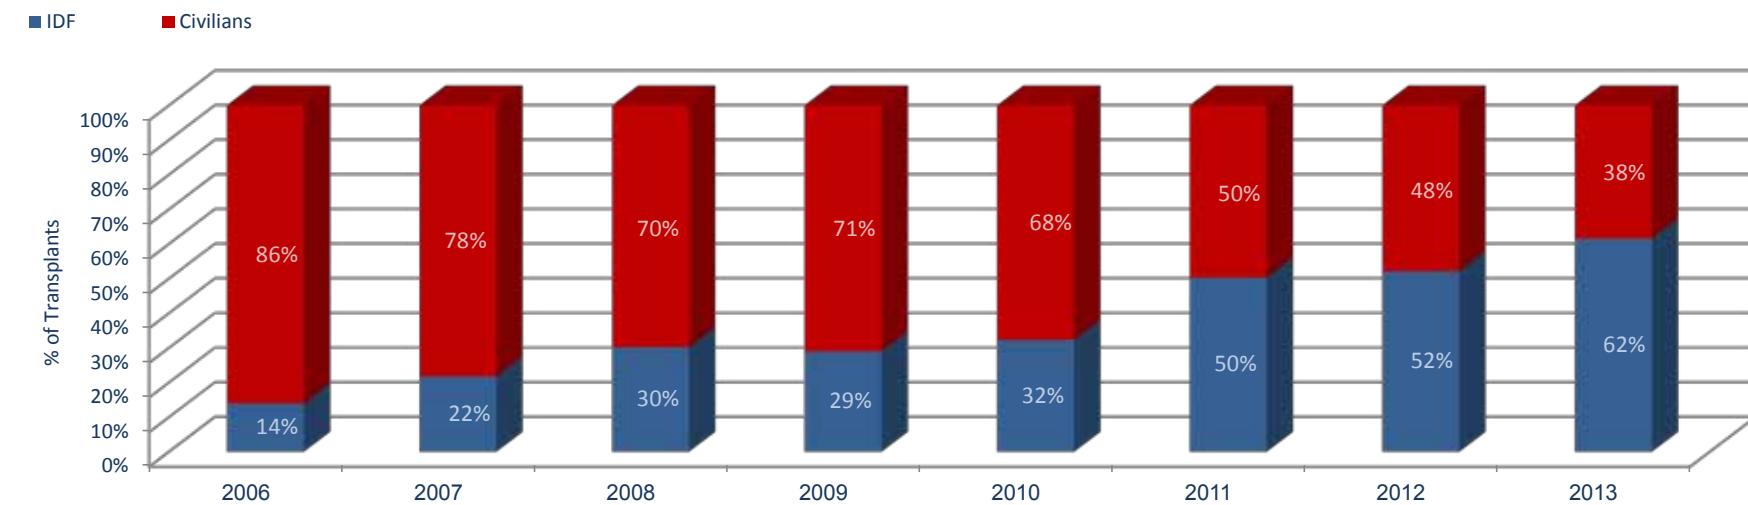

Fig. 7: % IDF Transplants v. % Civilian Transplants

The rate of transplants done from among IDF conscripts shows a steady annual increase. At the end of 2013, IDF recruits represented 38.7% of the total donors in the registry while they provided stem cells for 62% of the transplants. They are clearly a preferred donor population.

Ezer Mizion and the IDF: A Lifesaving Partnership

Since matching a stem cell donor with a patient is rooted in genetic compatibility, the likelihood of a matching donor is from the patient's race or ethnicity. In 2005 Ezer Mizion signed an agreement with the Israel Defense Forces where every conscript is given the opportunity to join Ezer Mizion's registry as part of the induction process, on the IDF base. This is a population of young, healthy potential donors who cover the entire ethnic spectrum.

This lifesaving partnership has indeed catapulted Ezer Mizion's registry forward in size and significance all over the world since transplant centers have a clear preference for younger donors and they cover many of the new ethnic combinations that have become more common with the rise in "mixed ethnicity" marriages.

► **Soldiers joining the bone marrow registry at the IDF recruitment base**

WINGS OF SENSITIVITY

It was a very moving encounter: There, on the line-up square of the Chatzerim Military Base stood Lieutenant N., a young officer who just got his Air Force wings. Up in the audience sat the man whose life was saved, thanks to a bone marrow donation he received from the young pilot.

Several years ago, when Lieutenant N. enlisted in the IDF, he joined Ezer Mizion's Bone Marrow Donor Registry as part of his induction. One of hundreds who signed up that week, he assumed nothing would ever come of it and promptly forgot about it. But he was wrong.

A while later, he was found to be a compatible donor for Shmuel Harari, a 63-year-old resident of Arad,

whose last chance to survive was a stem cell transplant. The transplant was successful

and now Harari longed to meet his donor.

The young Lieutenant was also anxious to meet the person whose life he had saved and so plans were made to meet at the "Wings Parade" ceremony held at the conclusion of the pilot training course. Emotions already high due to the event, they reached even further heights as the two embraced, sharing their joy with Lieutenant N's family and fellow pilots.

Harari's daughter, son-in-law and two grandchildren had accompanied the jubilant grandfather. "Because of you, I'll be able to watch these children grow up," he told his donor.

YOUR INVOLVEMENT

As the need and use for stem cell transplants has grown, so has our charge to do more.

Caring people from all over the world help us coordinate fundraising events to benefit our Bone Marrow Registry and cancer support activities. They play a critical role in spreading the word about the needs of cancer patients, and of the need for a robust registry and its importance in saving lives of patients everywhere. In 2013 philanthropists from the USA, UK, Brazil, Canada and Israel worked tirelessly to support our activities.

We acknowledge their efforts and thank them for helping raise and provide funds that enable patients to access the support and lifesaving transplants they need.

You can help too! Give now! One hundred percent of your donation will go directly to the cause of your

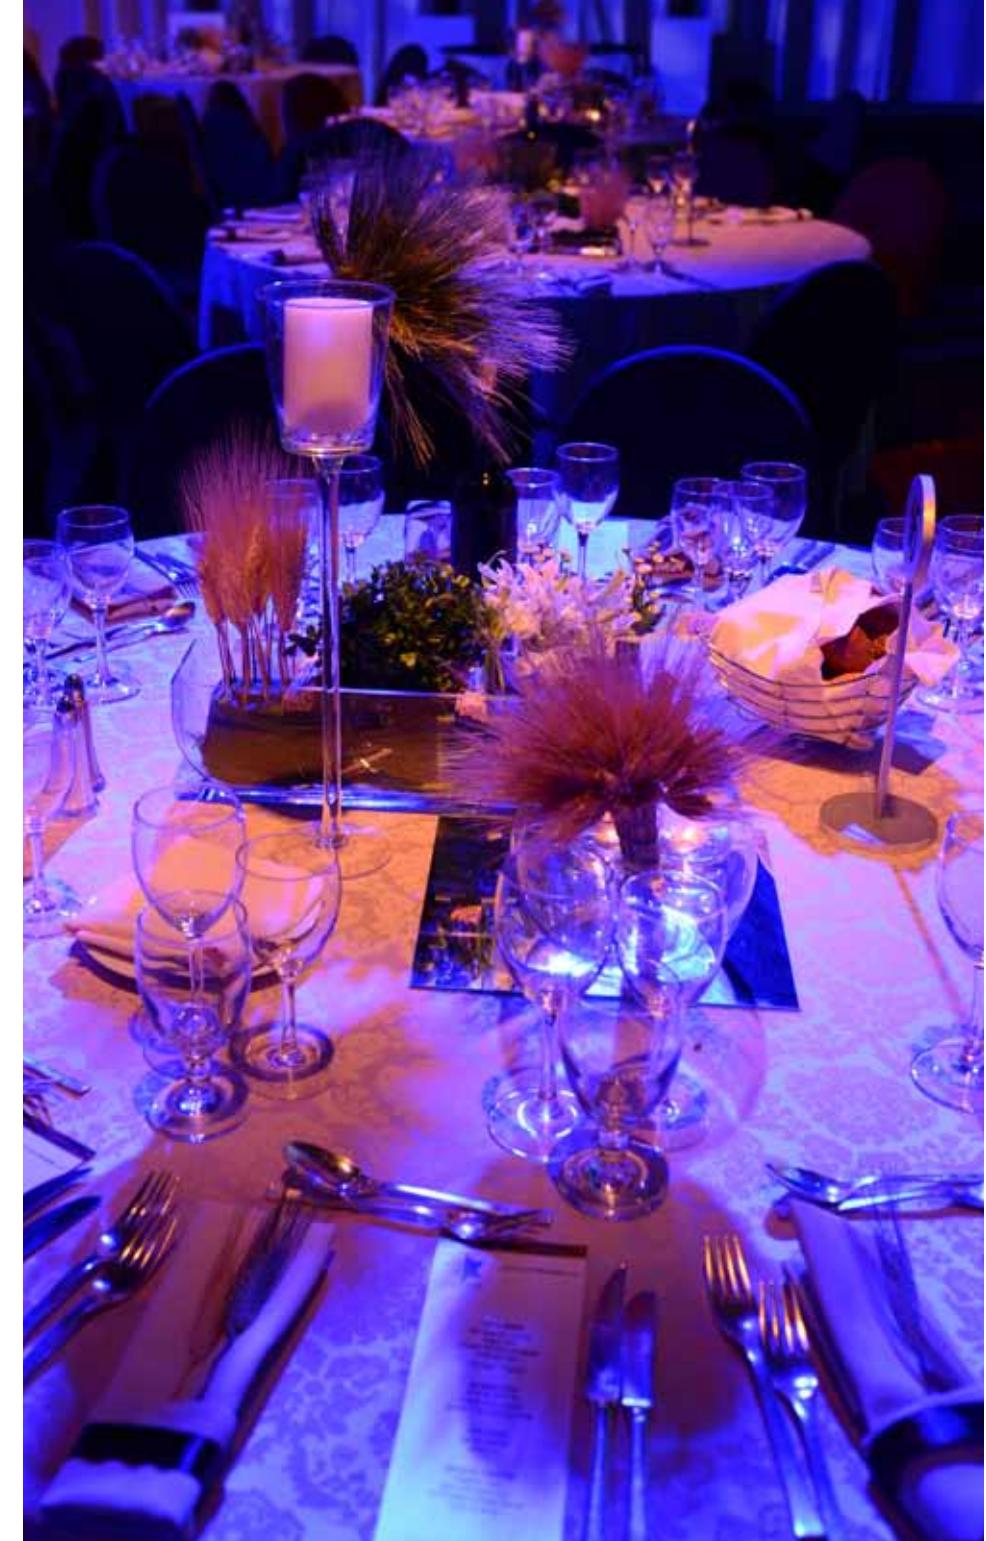

choice: cancer patient support activities, patient stipends, funding lab testing for new potential stem cell donors who join the registry, or opening a personalized donor pool.

Get involved in a fundraising event in your community. Sponsor and play at our Golf Event. Advocate with foundations and matching gift or corporate sponsors. Remember us in your will. Sign up for our email updates at www.ezermizion.org

Stay in touch and spread the word.

Ofra Konikoff, Chief Transplant Coordinator, addressing a gala fundraising event

PERSONALIZED DONOR POOLS (DP)

We acknowledge with deep appreciation the patrons of the following Donor Pools whose generosity has covered the cost of lab testing for new potential stem cell donors, funded deeper level lab testing and enabled the growth of our registry.

Your caring has significantly increased the chances of survival for cancer patients everywhere. The potential donors in your pool are there and ready for any patient who will need them in the future, and for whom time is of essence.

We look forward to sharing with you the wonderful news that more lives have been saved from your donor pool.

SETTING UP A DONOR POOL

When a person joins Ezer Mizion's registry his cheek swab or blood sample is lab tested for genetic tissue typing. Tissue typing is costly: \$65 for every person who joins the registry. Search requests received at the registry are checked against all potential stem cell donors listed for compatibility. Donor and patients are matched and lifesaving transplants are facilitated.

Stem cell testing sponsors can set up a Donor Pool in Ezer Mizion's main registry, bearing the name of their choice. Each Donor Pool includes all the potential stem cell donors whose initial tissue typing was funded by the sponsor.

Upon its initial testing, every blood sample is given a tracking code and the sponsored codes are entered into the Donor Pool where

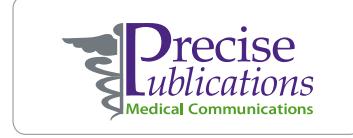

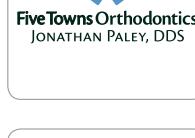

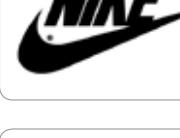

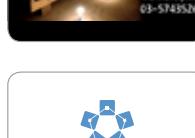

they are constantly monitored. Sponsors of Donor Pools are notified when a lifesaving stem cell transplant is carried out from their pool, sharing the exciting news that they have been instrumental in saving a patient's life.

Supporting Ezer Mizion's registry is an "insurance policy" for everyone. A completely compatible donor is not something that can be bought with money. Illness does not differentiate between rich or poor, young or old. The registry is vital for you, for me, for our loved ones and for the entire Jewish people.

For more information on setting up a donor pool in honor or in memory of someone dear to you, contact us at info@ezermizion.org

APPRECIATING OUR SPONSORS

◀ **Oranit - Ezer Mizion's cancer patient guest home and cancer support services center**

Home-away-from-home Cancer Support

Cancer therapy treatments take place in hospitals on an outpatient basis, whenever possible. In Israel, several major children's oncology units are located around the Tel Aviv area. Young cancer patients who live in other parts of the country have to travel hours every day for their outpatient treatments.

Children who have to endure the ravages of chemotherapy and radiation are exhausted. They are further debilitated by the hours they spend every day on the road to and from the difficult treatments.

This all changed in 1996, when Ezer Mizion - with the generous assistance of the Bracha & Motti Zisser Foundation, Andrew & Margaret Rosinger, and Israel's National Insurance

Institute - opened Oranit, a home away from home for young cancer patients and their families.

Located in Petach Tikvah, near Israel's major pediatric oncology centers, Oranit spares families from exhausting daily trips for brief treatment sessions. These families are referred to Ezer Mizion by doctors, nurses or social workers at hospitals where they are undergoing cancer therapy.

Oranit provides an escape from the world of chemotherapy and aggressive treatments into a haven of comfort, caring and cheer.

In addition to the 18 spacious and comfortable suites of the Andrew and Margaret Rosinger

Residential Wing, Oranit has a dining hall, an auditorium, a synagogue, the beautifully landscaped Malka Lazarus playground, the Rinat Bakshi Wildlife Pavilion and an extensive program of recreational and emotional therapy activities at the Donald Berman Rehabilitation Center.

In contrast to hospitals and treatment, Oranit is a beautiful, happy place where families can relax and spend quality time together in spite of the health crisis they are undergoing. Ezer Mizion cancer support services are provided free of charge to the cancer patient and all immediate family members (for pediatric cancer patients: parents and siblings; for adult cancer patients: spouses and children).

"Please take this sarcoma away" was the wish that Gaya wrote on her helium balloon that she sent flying up to heaven, hopeful that her prayer will be answered.

Cancer Patient Services Profile of Population Served in 2013

420
